## Should You Be Worried About Asbestos in Your Commercial Building?

---

Since being first mined over 4,000 years ago, asbestos has been very popular and has served many purposes. Asbestos is a group of various minerals, which contain some very beneficial physical properties. From trapping sound to resistance to fire and heat, asbestos has had many productive uses. ***However, this powerful substance is very dangerous for our health***.

One of the most common uses of asbestos was for insulation purposes. Before the 1990s, most homes and commercial buildings were built with asbestos cement. ***If your commercial building in Utah was built before 2000, we highly recommend getting an inspection to test for asbestos***.

***Asbestos in commercial buildings is usually found in the following areas:***

- Ceilings
- Walls

- Drywall
- Floors
- Pipe Insulation
- Boilers
- Gutters
- Roofs

Given the long list of areas that may contain asbestos, it is a very serious matter. ***Exposure to asbestos has been linked to the development of lung cancer, mesothelioma, and other serious illnesses.***

## How to Check for Asbestos

---

The truth is – checking for asbestos can be very difficult. Luckily, we have the best commercial asbestos removal experts in the area. They can perform the proper tests and gather samples as needed. ***This is the safest, most-effective way to ensure you're commercial building is free from asbestos.***

Although a professional should be checking for asbestos, you can always make some observations for yourself. ***The important thing to remember is that asbestos isn't harmful unless it's components are disturbed.*** This is very common when remodeling. Drilling holes, moving furniture, cutting open walls, or ripping out floorboards are all examples of how asbestos can be thrown into the air. ***These actions can release asbestos fibers, which are extremely harmful once inhaled.***

***Luckily, there are some ways to physically notice if asbestos is present in your commercial space. These include:***

- Tears in your chairs, couches, etc.
- Water damage to your ceilings or walls
- Damage to the floor tiles
- Worn out pipes
- Boiler damage
- Cracked walls

If you're looking for professional asbestos removal in your commercial building in Utah, give us a call at **801-416-2666** for a ***FREE phone consultation!*** Our Utah Flood Cleanup professionals are available 24/7.

## Asbestos Removal Laws in Utah

---

In regards to asbestos removal laws, it is ***illegal*** to incorrectly disrupt some asbestos-containing materials in Utah. To avoid any fees or legal issues, the property should be inspected by a ***State Certified asbestos inspector*** before any work has started. If a large amount of asbestos is found, you may have to write up a notification to the Utah Division of Air Quality, pay a fee, and wait two weeks before any work can continue. Demolitions do require a written notification — even if no asbestos materials are found. Furthermore, this harmful material ***must be disposed at an approved asbestos waste location.***
