

Mold Abatement

 utahfloodcleanup.com/mold-abatement/

Are you in need of mold removed from your home or business? Call us today at (801) 416-2666 for fast service from professional mold removal and remediation specialists you can trust.

Mold remediation, also referred to as mold abatement, is the process that is used to eliminate mold. Mold grows in damp areas, humid areas and areas affected by moisture. Common places people find mold include the bathroom, kitchen, crawl spaces and areas where leaks are present and if not taken care of right away, can cause significant damage to your property and can even cause health issues.

The Dangers of Mold

Some molds such as *black mold* are considered toxic because they produce compounds that can cause a variety of health issues. These health issues include chronic sinus infections, difficulty breathing and fatigue. Mold can also exacerbate the symptoms of existing health problems, especially respiratory conditions like asthma and chronic obstructive pulmonary disease. Therefore, ***if you suspect that your home or business has a mold problem, seeking assistance from a professional mold remediation company like [Utah Flood Cleanup](#) is essential to remove it properly.***

Have Questions Related to Mold?

[Call Utah Flood Cleanup Today \(801\) 416-2666](#)

Professional Mold Remediation Process

At Utah Flood Cleanup, we have developed mold abatement techniques (containment, construction and remediation) that comply with the guidelines set forth by the Environmental Protection Agency (EPA) and the Health Department. Furthermore, all of ***Utah Flood Cleanup's technicians are certified by the IIRC*** (Institute of Inspection, Cleaning and Restoration Certification). Each mold damage scenario is unique; therefore, our mold remediation experts create custom-designed solutions for our clients.; however here is the the typical mold abatement process outlined below.

Step One: Schedule Your Complimentary Mold Inspection and Damage Assessment Appointment

The first step in remedying your mold problem is to ***contact Utah Flood Cleanup's mold remediation specialists*** to schedule your on-site mold inspection and damage assessment appointment. During this appointment, one of our ***certified mold remediation experts*** will thoroughly inspect the property. He/She will be looking for visible signs of mold and evidence of water damage: In addition, our experts use various technologies to locate hidden water sources and mold.

Step Two: Containing the Mold

Advanced containment procedures are utilized to keep the mold from spreading. These procedures may include the creation of negative air chambers as well as the use of negative air pressure during the cleanup process. Preventing the mold from spreading requires that fans as well as heating, ventilation and air conditioning (HVAC) systems remain off until the cleaning process is complete.

Step Three: Filtering the Air

Once the cleaning process is complete, specialized *air filtration equipment is used to remove any microscopic mold spores that remain in the air*. Furthermore, as the air is being filtered, our experts use powerful high-efficiency particulate air (HEPA) vacuums and 'air scrubbers' to *ensure mold spores are captured*.

Step Four: Addressing Mold-Infested Materials

The amount of mold that is present and the surfaces that are affected determine the steps our experts take during your mold abatement process. For example, mold-infested carpeting must be removed and then *disposed of properly*. Antimicrobial and anti-fungal treatments may be necessary to *prevent the formation of new mold colonies and to remove mold colonies that already exist*.

Step Five: Testing to Ensure Mold Remediation Was Successful

Once the mold remediation process is complete, *we test the work area to verify that the mold abatement process was successful and a certified clearance is achieved*.
