What Kinds of Polluted Sewage Water Can We Cleanup?

Sewer Backup is Preventable

Water damage is classified into 3 types of contaminated water; clean water, gray water, and black water. Our Roy, Utah sewage cleanup professionals will inspect your home or office, and then help to determine the appropriate plan of action based on the type of contaminated water in your home.

The 3 types of contaminated water sewage are:

- **Clean water:** This refers to a level of water backup that does not pose an immediate health threat, and is generally a result of bathtub or sink overflow, broken water lines, a burst pipe, or water leaking from an appliance or faucet; ***without timely treatment, this water can turn into black or***

gray water sewage, depending on length of time, temperature, and contact with surrounding contaminants.

- **Gray Water:** This refers to wastewater that is contaminated with bacteria or viruses, and could cause discomfort or illness. Gray water is generally a result of water discharged from a dishwasher, laundry washing machine, or from kitchen sinks that may contain urine, but no feces.
- **Black Water:** This refers to wastewater that contains harmful bacteria or fungi, and can cause severe illness or death. Black water is usually a result of water from beyond the toilet trap, water from the toilet bowl with feces, flooding from rivers / rain water, or standing water that has begun to support microbial growth.

Sewage Damage Cleanup Costs

The cost to cleanup a sewage backup event varies based on the scope of your particular job and the level of sewage. Typically, homeowner's insurance policies do **NOT** cover sewage backup incidents, **unless** you add that specific type of coverage separately. If your sewage damage is covered by insurance, we will happily work with your insurance company to obtain payment.

If you do not have sewage backup insurance coverage, Utah Flood Cleanup is happy to offer you financing options to cover the cost.

For more information about Roy, Utah sewage cleanup costs or to inquire about financing, contact Utah Flood Cleanup at 801-416-2666.
