Natural disasters can strike at any time: ***flooding, landslides, severe weather, and extreme temperatures are just a few common disasters affecting land, property and lives in the state of Utah.*** In many regions of the state, wildfires are also common, and can cause severe damage to your land and property. At [Utah Disaster Cleanup](#), our disaster specialists are prepared to deliver prompt and professional assistance when a disaster hits home.

What Natural Disasters Affect Utahns?

Many natural disasters are associated with particular seasons, and though nature has a will all of its own, should a disaster strike your home or business, disaster services are available and can control the spread and minimize the damage that your property may have sustained in the disaster.

Common Disasters in Utah

- **Extreme rain & flash floods.** Flash floods are common near rivers, streams and areas with uneven terrain and sloping land. Rain can cause severe damage to both structures and land formations, but addressing water damage as the result flooding early on will protect your property and increase the ease of restoration after the disaster.
- **Landslides.** Flooding increases the risk of landslides (sometimes referred to as “mudslides”). In the event of a landslide, it is critical to act swiftly and divert the water and mud away from your property.
- **Avalanche and snow damage.** Avalanches are like landslides, except with a massive volume of tumbling snow; ground disturbances from human and animal activity can trigger avalanches. For those with properties at a safe distance from the mountainous areas, snow can still cause serious damage: snow is incredibly heavy and once it melts, it can cause water damage.

- **Wildfires.** Unfortunately, recent years have seen a spike in wildfires and the threat is especially high during the summer months when hot and dry conditions prevail.
- **Severe weather and extreme temperature.** Depending on your home or business, severe weather conditions can cause serious damage, spanning everything from lightning and increased fire risk, to freezing pipes.

Some natural disasters, such as wildfires, landslides, and flooding require evacuation; for your safety, [it's important to have a plan in place](#), particularly if you live in a danger zone.
